# FASTFOOOD

1.   INSTALL XAMPP

Download and install the latest version of XAMPP in your pc.

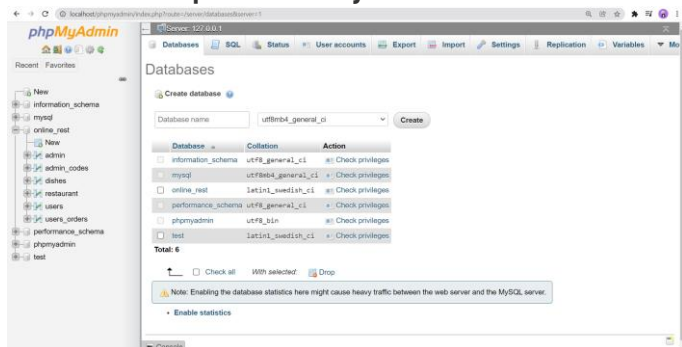

2.   LOCAL HOST

Start "Apache server" and "my SQL" server from XAMPP Control Panel

3.   IMPORT DATABASE

Go to C:\xampp\htdocs and copy/paste the project folder here.

After that, type "localhost\phpmyadmin" in the browser to open PHP myadmin.

Import the SQL database into phpMyAdmin by clicking import and selecting the SQL file.

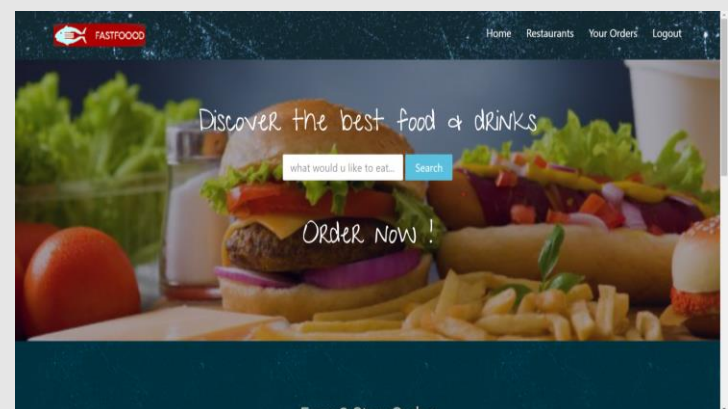

4.   OPEN WEBAPP

After uploading database, type "localhost" in the browser, the htdocs folder opens which contains all the folders.

Click on the project folder to open the webapp.

Now, you can manage the database and do any changes/updates required through PHPmyadmin.
